

Telco Cloud and NFV/VNF Partner

Dorado Software and Sonus

AT-A-GLANCE

- SBC SWE Integration
- Communication Service Providers
- OEM
- Enterprise

NFV / MANO FEATURES

- ETSI Compliant
 - Catalogs
 - NFVI Inventory
 - Interface/REST
 - Onboarding
 - Instantiation
 - Closed Loop Processing
 - NFVO and VNFM
- OpenStack / VMware
- Automatically integrated into ongoing management
 - Physical, Logical & Virtual Elements
 - Network Discovery & Inventory
 - Events and Faults
 - Management of multi-vendor, multi-domain IP infrastructure

JOINT SOLUTION

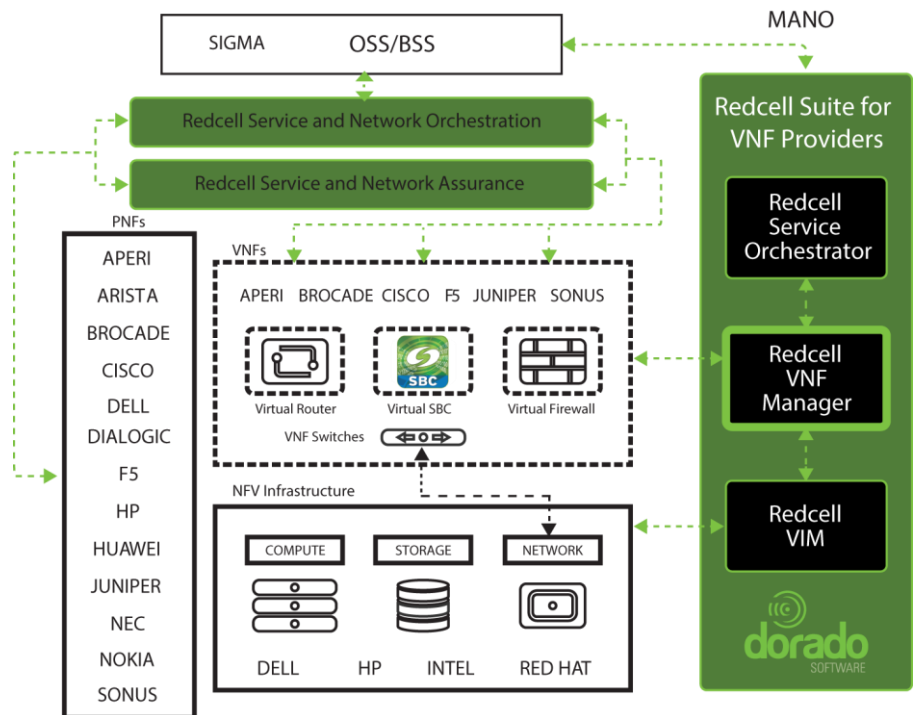

Dorado Software and Sonus Networks partner for a joint orchestration solution for Communication Service Providers (CSPs). The solution lets CSPs centrally manage, activate, orchestrate and automate Sonus' virtualized Session Border Controller Software Edition (SBC SWE) through Dorado's Redcell suite, in converged legacy/virtual Cloud-based networks.

VNF Management

VNFs are the core building blocks of the CSP's agile service catalog, yet are an evolving concept. Our joint solution provides the tools, processes, and standards required to support virtual transition in a sustainable manner.

NFVI Management

The NFV infrastructure is rapidly evolving to meet the hosting requirement of network functions. Our joint solution offers an agile and comprehensive management system to allow CSPs to utilize the latest features.

REDCELL MANO

Dorado Software's Redcell MANO solution adheres to the ETSI NFV guidelines and provides capability to instantiate, maintain, scale and remove end-to-end network services. Redcell manages the hardware, software and network resources, both physical and virtual that support network services in a COTS-based data center environment. These processes are in near real-time to support the business demands of the network, service and end-customer.

ECOSYSTEM

Dorado Software has established close relationships with many of the key IP infrastructure providers including Juniper, Cisco, Nokia, Dell, NEC, Ericsson and others. These relationships enable us to work closely with our customers to anticipate and support new technologies and features as they are introduced into the marketplace.
